SPECIFICATION

PART NO. : LT1821-81

5.0mm ROUND LED LAMP

| Approved by	Checked by	Prepared by
Sam	*Yang*	*Qing*

Description

This green lamp is made with GaP/GaP chip and green diffused epoxy resin.

Notes:

1. ALL DIMENSIONS ARE IN mm.

2. TOLERANCE IS±0.25mm UNLESS OTHERWISE NOTED.

Description

Part No.	LED Chip		Lens Color
	Material	Emitting Color	
LT1821-81	GaP/GaP	Green	Green diffused

	LT1821-81	5.0mm ROUND LED LAMP

Absolute Maximum Ratings at Ta=25

Parameter	Symbol	Rating	Unit
Power Dissipation	P_D	78	mW
Reverse Voltage	V_R	5	V
D.C. Forward Current	If	30	mA
Reverse (Leakage) Current	Ir	100	μ A
Peak Current(1/10Duty Cycle,0.1ms Pulse Width.)	If(Peak)	100	mA
Operating Temperature Range	Topr.	-25 to +85	
Storage Temperature Range	Tstg.	-40 to +100	
Lead Soldering Temp.(1.6mm from body) for 5 seconds		260	

Electrical and Optical Characteristics:

Parameter	Symbol	Condition	Min.	Typ.	Max.	Unit
Luminous Intensity	Iv	If=20mA	7.56	17.0		mcd
Forward Voltage	Vf	If=20mA		2.1	2.6	V
Peak Wavelength	λP	If=20mA		567		nm
Dominant Wavelength	λD	If=20mA		572		nm
Reverse (Leakage) Current	Ir	Vr=5V			100	μA
Viewing Angle	2 1/2	If=20mA		35		deg
Spectrum Line Halfwidth	Δλ	If=20mA		30		nm

NOTE: THE DATAS TESTED BY IS TESTER
Typical Electrical / Optical Characteristics Curves :
FORWARD CURRENT VS.APPLIED VOLTAGE

Forward Current IF(mA) vs. Applied Voltage (V)
FORWARD CURRENT VS. LUMINOUS INTENSITY

Relative Luminous Intensity vs. Forward Current (mA)
FORWARD CURRENT VS. AMBIENT TEMPERATURE

Forward Current IF(mA) vs. Temperature(°C)

RADIATION DIAGRAM

Precautions:

TAKE NOTE OF THE FOLLOWING IN USE OF LED

1. Temperature in use

    Since the light generated inside the LED needs to be emitted to outside efficiently, a resin with high light transparency is used; therefore, additives to improve the heat resistance or moisture resistance (silica gel , etc) which are used for semiconductor products such as transistors cannot be added to the resin.

    Consequently, the heat resistant ability of the resin used for LED is usually low; therefore, please be careful on the following during use.

    Avoid applying external force, stress, and excessive vibration to the resins and terminals at high temperature. The glass transition temperature of epoxy resin used for the LED is approximately 120-130 .

    At a temperature exceeding this limit, the coefficient of liner expansion of the resin doubles or more compared to that at normal temperature and the resin is softened.

    If external force or stress is applied at that time, it may cause a wire rupture.

2. Soldering

    Please be careful on the following at soldering.

    After soldering, avoided applying external force, stress, and excessive vibration until the products go to cooling process (normal temperature), <Same for products with terminal leads>

    (1) Soldering measurements:

    Distance between melted solder side to bottom of resin shall be 1.6mm or longer.

    (2) Solder dip: Preheat: 90   max. (Backside of PCB), Within 120 seconds

    Solder bath: 250   max. (Solder temperature), Within 5 seconds

    (3) Soldering iron : 250   max. (Temperature of soldering iron tip), Within 3 seconds

3. Insertion

    Pitch of the LED leads and pitch of mounting holes need to be same

4. Others

    Since the heat resistant ability of the LED resin is low, SMD components are used on the same PCB, please mount the LED after adhesive baking process for SMD components. In case adhesive baking is done after LED lamp insertion due to a production process reason, make sure not to apply external force, stress, and excessive vibration to the LED and follow the conditions below.
    Baking temperature: 120   max.   Baking time: Within 60 seconds

    If soldering is done sequentially after the adhesive baking, please perform the soldering after cooling down the LED to normal temperature.
